

# Industrial Troubleshooting

The industrial support service at **Rubber Consultants** consists of a team of highly experienced engineers and technologists capable of delivering practical advice and solutions to real life manufacturing issues.

## Do you have manufacturing problems?

- High scrap and rework rates
- Poor product performance
- Poor product appearance
- Poor service life
- Low production output

## Possible causes

- Poor product or tool design
- Poor compound design
- Mixing problems
- Contamination problems
- Lack of process control

## The solution

Call on **Rubber Consultants'** confidential industrial support and troubleshooting service.

Experienced engineers and technologists can assist you in identifying solutions to your problems by visiting your facilities to review the process and using a range of tools and techniques backed up by facilities such as modern analytical equipment for material characterisation tests, simulation software and a fully equipped rubber processing workshop in which off-site trials can be performed.
